PRODUCTION PROCEDURES	The antibody was absorbed against human serum, isolated by affinity chromatography using antigen coupled to agarose beads. Immunoglobulin concentration was determined using Beer's Law where 1mg/mL IgG has an A280 of 1.4. By immunoelectrophoresis and ELISA this antibody reacts specifically with monkey IgG and with light chains common to other monkey immunoglobulins. Species detected are Rhesus, and Cynomolgus. Reaction to human IgG was less than 1%. No antibody was detected against non-immunoglobulin serum proteins.
