PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to INA immobilized on solid support. The epitope recognized by A305-441A-T maps to a region between residue 150 to 200 of human Alpha-internexin using the numbering given in entry Q16352.2 (GeneID 9118). Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	Not recommended. A305-441A has not performed satisfactorily when used for WB of INA in crude preparations (e.g. whole cell lysate). This antibody can be used for WB of enriched (e.g. immunoprecipitated) sources of INA.
Immunoprecipitation	2 - 10 µg/mg lysate
