PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to Neurofibromin 1 immobilized on solid support. The epitope recognized by A304-932A-T maps to a region between residue 150 to 200 of human Neurofibromin 1 using the numbering given in entry NP_001035957.1 (GeneID 4763). Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use. Western Blot: Not recommended. A304-932A has not performed satisfactorily when used for WB of Neurofibromin 1 in crude preparations (e.g. whole cell lysate). This antibody can be used for WB of enriched (e.g. immunoprecipitated) sources of Neurofibromin 1. Immunoprecipitation: 2 - 10 µg/mg lysate
