PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to SPATA5 immobilized on solid support. The epitope recognized by A305-167A-T maps to a region between residue 843 to 893 of human Spermatogenesis-associated protein 5 using the numbering given in entry Q8NB90.3 (GeneID 166378). Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	Not recommended. A305-167A has not performed satisfactorily when used for WB of SPATA5 in crude preparations (e.g. whole cell lysate). This antibody can be used for WB of enriched (e.g. immunoprecipitated) sources of SPATA5.
Immunoprecipitation	2 - 10 µg/mg lysate
