PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to SYNM immobilized on solid support. The epitope recognized by A305-468A-T maps to a region between residue 1400 to 1450 of human Synemin using the numbering given in entry O15061.2 (GeneID 23336). Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	Not recommended. A305-468A has not performed satisfactorily when used for WB of SYNM in crude preparations (e.g. whole cell lysate). This antibody can be used for WB of enriched (e.g. immunoprecipitated) sources of SYNM.
Immunoprecipitation	2 - 10 µg/mg lysate
