PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to FKBP-135 immobilized on solid support. The epitope recognized by A300-211A-T maps to a region between residues 1175 and the C-terminus (residue 1234) of human FK506-binding protein 135 using the numbering given in TrEMBL entry Q9Y4D0 (GeneID 23307). Immunoglobulin concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	Not recommended. Use rabbit anti-FKBP-135 antibody A300-209A or A300-210A.
Immunoprecipitation	1 - 4 µg/mg lysate
