PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to UBAP2L/NICE4 immobilized on solid support. The epitope recognized by A300-534A maps to a region between residue 1025 and the C-terminus (residue 1087) of human Ubiquitin Associated Protein 2-Like using the numbering given in entry AAH03170.1 (GeneID 9898). The epitope is not found in the shorter entry BAA09765.1. The more quickly migrating protein detected by using A300-533A (but not detected by A300-534A) is believed to be the shorter from of UBAP2L/NICE4. Immunoglobulin concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	1:5,000 - 1:25,000
Immunoprecipitation	2 - 10 µg/mg lysate
