PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to ADAMTS13 immobilized on solid support. The epitope recognized by A301-000A-T maps to a region between residue 75 and 125 of human ADAM (a disintegrin-like and metalloprotease) metallopeptidase with thrombospondin type 1 motif, 13 using the numbering given in entry NP_620594.1 (GeneID 11093). Immunoglobulin concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	Not recommended. Use goat anti-ADAMTS13 antibody A301-002A or A300-003A.
