PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to C1orf55 immobilized on solid support. The epitope recognized by A302-099A-T maps to a region between residue 401 and 451 of human chromosome 1 open reading frame 55 using the numbering given in entry NP_689821.3 (GeneID 163859). Immunoglobulin concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	Not recommended. A302-099A has not performed satisfactorily when used for WB of C1orf55 in crude preparations (e.g. whole cell lysate). This antibody can be used for WB of enriched (e.g. immunoprecipitated) sources of C1orf55.
Immunoprecipitation	2 - 5 µg/mg lysate
