ORIGIN USA

PRODUCTION PROCEDURES Antibody was affinity purified using an epitope specific to Phospho MEK1 immobilized on solid support.

The epitope recognized by A303-611A-T maps to a region of human MAPK/ERK kinase 1 (dual specificity mitogen-activiated protein kinase kinase 1) surrounding threonine 286 using the numbering given in entry NP_002746.1 (Gene ID 5604) when the threonine residue is phosphorylated.

Immunoglobulin concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.

APPLICATIONS Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot	Not recommended
Immunoprecipitation	2 - 10 µg/mg lysate
Immunohistochemistry	1:200 - 1:1,000. Epitope retrieval with citrate buffer pH 6.0 is recommended for FFPE tissue sections.
