PRODUCTION PROCEDURES	Antiserum was solid phase adsorbed to ensure class specificity. The antiserum was fractionated and passed over DEAE to yield an IgG fraction. Total protein was determined using Beer's Law where 1mg/mL IgG has an A280 of 1.4. By immunoelectrophoresis this antibody reacts specifically with IgM. No antibody was detected against other immunoglobulins, light chain or non-immunoglobulin serum proteins. This antibody may cross react with IgM from other species.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.
